

CYBERPRAHARI — VIVA DEFENSE & FACULTY DEMO GUIDE

Course: Ethical and Legal Frameworks for Digital Systems (MDC5011C) • Semester 7

Student: **Sujal Shrivastav** • Silver Oak College of Computer Application, Silver Oak University

GitHub: github.com/Sujal-Shrivastav-07 • Repo: github.com/Sujal-Shrivastav-07/ethics

1. THE 60-SECOND OPENING PITCH

*"Respected Ma'am and Faculty Members, I am Sujal Shrivastav. My Innovative Assignment is titled **CyberPrahari**, developed under the theme 'Responsible Technology Innovation Project: Designing Ethical, Secure, and Inclusive Digital Solutions'. Rather than presenting textbook definitions, our project is grounded in **real-world empirical cyber threat intelligence from the official I4C Cyber Digest** published by the Ministry of Home Affairs.*

*We selected and analyzed **10 authentic cyber incident classes**—including Digital Arrest extortions, AePS biometric fingerprint cloning, predatory loan app blackmail, AI deepfakes, QR code reverse payment scams, and postal delivery smishing APKs. For every case, we structured a 14-parameter forensic dossier mapping the attack lifecycle, ethical violations, and applicable Indian cyber laws under the **IT Act 2000** and the newly enacted **Bharatiya Nyaya Sanhita 2023 (BNS)**.*

*Based on these findings, we engineered a production-ready, zero-tracking web platform featuring an interactive **'Is This a Scam?'** Diagnostic Tool, an automated **Cyber Hygiene Self-Audit**, and emergency guidance centered on the **1930 National Cybercrime Helpline**."*

2. MAPPING TO THE 100-MARK EVALUATION RUBRICS

Rubric Component	PDF Requirement	CyberPrahari Implementation	Marks
Problem & Case Selection	5–10 recent I4C incidents	10 Authentic I4C Cases (Zero data fabrication)	10
Threat & Legal Analysis	Examine attack, ethics, laws, prevention	Standardized 14-point dossiers + BNS 2023 / IT Act mapping	20
Innovative Solution	Website/app prototype, awareness campaign	React Platform + Scam Analyzer + Audit Tool + Poster	20
Technical Implementation	Design, functionality, deployment	React 18 + Vite + Tailwind CSS + Dockerized (0 build errors)	15
Formal Documentation	10–15 pages, A4 TNR 12pt 1.5 spacing	13-Page Academic PDF Report (IEEE Citations)	10
Presentation Skills	10–12 slides seminar deck	12-Slide Landscape Presentation Deck PDF	10
Ethics & Governance	Digital ethics, Privacy by Design	4 Ethical Pillars + Developer Code of Conduct	10
References & Originality	Authentic sources, IEEE format	Primary GoI citations (I4C, MHA, CERT-In, RBI)	5
TOTAL			100

3. TOP 5 TOUGH VIVA QUESTIONS & MODEL ANSWERS

Q1: "What is the difference between IT Act Section 66C and Section 66D?"

Answer: Section 66C specifically penalizes **Identity Theft**—the fraudulent use of someone's electronic signature, password, biometric trait, or unique identification feature (3 years imprisonment + ₹1 Lakh fine). Section 66D penalizes **Cheating by Personation using a computer resource**—which applies when an attacker impersonates another person (such as a CBI officer, bank manager, or customs official) to cheat the victim (3 years imprisonment + ₹1 Lakh fine).

Q2: "What is 'Digital Arrest' under Indian Law?"

Answer: 'Digital Arrest' is a **complete legal fiction created by cyber criminals**. Neither the Code of Criminal Procedure (CrPC) nor the newly enacted Bharatiya Nagarik Suraksha Sanhita (BNSS) has any provision for placing citizens under arrest or conducting trials via Skype, WhatsApp, or video calls. Law enforcement never asks citizens to transfer money to 'safe government verification accounts'.

Q3: "How does the AePS biometric spoofing attack work without an OTP?"

Answer: The Aadhaar Enabled Payment System (AePS) requires only an Aadhaar number and a fingerprint match on an optical Point of Sale scanner—no OTP is required. Fraudsters download land sale deeds from public registries displaying unredacted thumbprints, cast 3D silicone synthetic rubber thumbs, and withdraw cash at rogue business correspondent POS devices because low-cost optical scanners lack **hardware liveness detection**.

Q4: "What changes did the Bharatiya Nyaya Sanhita, 2023 (BNS) bring to cyber fraud?"

Answer: BNS replaced the Indian Penal Code, 1860: (1) **IPC Section 420** (Cheating) is now **BNS Section 318(4)** (up to 7 years rigorous imprisonment). (2) **IPC Section 170** (Impersonating public servants) is now **BNS Section 204**. (3) **IPC Section 383/384** (Extortion) is now **BNS Section 308**. (4) **IPC Section 468** (Forgery for cheating) is now **BNS Section 336**.

Q5: "What is Privacy by Design in your application?"

Answer: CyberPrahari embodies Privacy by Design: it requires **zero registration, zero phone numbers, and zero passwords**. All scam diagnostic calculations and security audit scoring run 100% locally in the client browser with zero cookies, zero external server tracking, and zero third-party telemetry.

4. LIVE DEMO STEP-BY-STEP SEQUENCE

- **Step 1 (Homepage):** Show live research metrics: 10 Verified Cases, 14+ Statutes Mapped, 100% Zero-Fabricated Data.
- **Step 2 (Case Library):** Filter by *"Biometric & Identity Fraud"* to show Case 02 (AePS). Click *"View Full Dossier"* to show the 14-parameter modal.
- **Step 3 (Scam Analyzer):** Select *"Extreme Urgency & Threats of Arrest"* and *"Video Call Claiming 'Digital Arrest'"*. Show score jump to 95 Points flashing **CRITICAL SCAM DANGER** and immediate 1930 defensive protocol.
- **Step 4 (Security Audit):** Check 4 items to demonstrate the interactive SVG progress ring and personalized hardening recommendations.
- **Step 5 (Emergency 1930):** Highlight the 2-Hour Golden Window and the Citizen Financial Cyber Fraud Reporting System (CFCFRS).
